

## The E-Museum System

Information Specialists Ltd (Infospecs)

The Infospecs E-Museum system consists of a ready-to-use database designed to manage a museum or local history collection. It is produced by Information Specialists Ltd (Infospecs) using Inmagic® DB/TextWorks® as the database software.

The E-Museum has been designed for museums, historical societies, schools and other organisations with heritage collections - where the main requirement is to catalogue and provide easy online search access to those collections.

- A menu screen (illustrated above) provides shortcuts to commonly performed accessioning and cataloguing procedures.
- Menu screens can be customised to include your organisation's or sponsor's logo, or to add additional shortcuts as required.
- E-Museum manages all kinds of objects, including artefacts, books, manuscripts, diaries, letters, maps, postcards and photographs.
- Images, documents and web sites can be referenced from the database and opened by clicking a hypertext link.
- Any amount of text, and any number of entries can be included in any field. All of the text is indexed for high speed searching.
- Records can be sorted by donor, location or subject - or any other field in the database.
- Location and donor reports are included, together with a form for producing acknowledgement letters.

(continued)

DB/TextWorks has a very powerful search engine. Searches can be field specific to increase search precision, or you can search across many fields at the same time. A keyword search across 1,000,000 records takes less than one second.

search the e-museum database

Return to menu

Keywords (searches object type, category, subjects, description and title)

AND

Use the boxes below for field specific searching

Object Type AND Classification

Object Category AND Producer

Description AND Donor

Subjects AND Date Acquired

Accession No AND Location

Searching the database is easy and fast - just use the customisable search screens and type your search items (e.g. words, phrases, words in proximity, and date ranges) in the appropriate boxes. You can toggle the Boolean button (AND, OR, NOT) to broaden or narrow your searches.

There is a great deal of flexibility in formatting and sorting records. You can produce reports sorted by donor, location, or subject - or by any field in the database. Reports can include thumbnails of images.

### 2001 1117 1 Postcard

Torpedo Bay; King Edward Pde.; North Head;  
Pilot Bay Boat Shed

The postcard is misnamed as Mt Victoria. Miss Matthews' ladies College in Jubilee Ave. Card has not been used. Torpedo Bay (Pilot Bay) with North Head in the background, with horse and trap on unsealed King Edward Pde. Army buildings shown on North Head, the pilot boat shed in bay, people and children on beach, shows houses in Jubilee Ave.

Display full record

Inmagic also produces web publishing solutions so that your databases can be accessed on an intranet or the Internet via a browser. For example, the Imperial War Museum in London catalogues its collections - exhibits, photographs, sound and documents - using DB/TextWorks and makes them available for searching on the Web using DB/Text *WebPublisher*.
