

INMAGIC® DB/Text® WebPublisher PRO

Flexible Information Management

Inmagic's interactive Web publishing solution, Inmagic® WebPublisher PRO, allows customers to deploy, publish and maintain TextWorks or Content Server textbases on the Web quickly and easily.

WebPublisher PRO, a component of the Inmagic® DB/Text® information management solutions, provides all of the advantages of Web interactivity at an affordable price, by making it possible to deploy, publish and maintain textbases on the Web. Unlike many Web publishing tools, which may require sophisticated knowledge of HTML and XML, *WebPublisher PRO* utilizes the WYSIWYG forms created in TextWorks. As a result, even non-technical users can easily publish their Inmagic textbases interactively on the Web.

Inmagic has provided easy-to-use and scalable solutions for deploying and accessing information on the Internet or a corporate intranet since 1996. Through the use of such standards as XML, HTML & SOAP, *WebPublisher PRO* gives you the ability to interact with information, publish content and edit records in a Web browser. With *WebPublisher PRO*, you have the power to organize and manage all types of information including text, multimedia, and images. *WebPublisher PRO* increases the value of your Inmagic textbases by making them accessible 24/7 via a Web browser.

Delivering Content to Organizations Worldwide

Many of the world's most prominent companies, universities, law firms and government agencies use *WebPublisher PRO* in conjunction with Inmagic's TextWorks software to manage business intelligence, research content, image and archive databases, product catalogs, help desk knowledge-bases and more. Because *WebPublisher PRO* is easy to deploy and can support textbases with thousands of documents, it is ideal for information-intensive organizations that require Web-based information management solutions.

Find Information Fast

WebPublisher PRO's high-speed fielded search engine makes finding information fast, easy, and precise. *WebPublisher PRO* performs keyword searches through a million records in under a second. You can narrow or broaden your searches by querying multiple fields to fine-tune your results. You don't have to wade through a sea of hyperlinks or hundreds of hits to find exactly the information you need. *WebPublisher PRO* enables you to search and retrieve information based upon the content of documents as well as with conventionally-structured fields.

Standards-Based Web Publishing

Through the use of XML, HTML, and SOAP, *WebPublisher PRO* is open and standards-based, providing the capabilities to:

- Publish content to the Internet or intranet via a Web browser
- Add or edit records in a browser
- Create interactive forms
- Provide multiple views of the data, with different layout, sorting, etc.
- Customize reports to your Web site design
- Tightly integrate textbases with other applications
- Publish new and updated content through RSS

Update and Maintain Documents Effortlessly

Updating and maintaining thousands of static HTML documents is tedious work. The combination of TextWorks and *WebPublisher PRO* provides you with a textbase-driven environment for publishing to the web or your intranet. As a result, you can easily modify groups of documents through operations such as batch import or batch modify. By using permissions you can allow designated users to maintain specific documents.

Because Extensible Markup Language (XML) separates the content from its formatting within a Web page, you can focus on what the information is, rather than how the information is displayed. All of the read/write capabilities of *WebPublisher PRO* — the ability to edit, add and delete records via the Web — are available using XML.

WebPublisher PRO System Requirements

Server Requirements:

- Intel Pentium processor, 500 MHz or higher
- One of the following operating systems:
 - Windows 2003 Server with Service Pack 1
 - Windows 2000 Professional with Service Pack 4
 - Windows 2000 Server with Service Pack 4
 - Windows XP Professional with Service Pack 2
- Hard disk: 10MB Disk Space (to install), 100 MB+ available (working storage)
- Memory: 512 MB RAM or greater
- Web server: Microsoft Internet Information Services (IIS) version 5.0 or later
- Microsoft .NET Framework Version 1.1 is required for the Inmagic Choices Browser.
- Web browser: Internet Explorer v6.0 or later
- Microsoft Internet Explorer version 6.0 or later installed on the server (to support XML functionality).
- TCP/IP installed and running
- An IP address and/or a domain name. If the server is connected to the Internet, the IP address needs to be registered.
- ISAPI or CGI (ISAPI recommended for better performance)

WebPublisher PRO Applications

Inmagic customers use WebPublisher PRO in a variety of ways:

- Adding, editing or deleting records to textbases (with password control)
- Allowing end-users to contribute content directly to the textbase via the Web or corporate intranet
- Enabling end-users to add comments or reviews to records in the textbase
- Creating various Web-based submission forms
- Providing other self-service capabilities for end users
- Enabling end-users to submit requests and questions to the appropriate staff
